Qingqing Li

January 8th, 1996 E-mail: qingqingli3631@outlook.com
Tel: +86 177-2192-5845 Address: Shanghai, China, 221000

Education

Master of Medicine Xuzhou Medical University **June 2023**
GPA: 3.60/5.0 Major: Anesthesiology

Publications

1. **Qingqing Li**, Ying Xie, Jinyi Lin, Miaomiao Li, Ziyan Gu, Tianli Xin, Yang Zhang, Qixia Lu, Yihui Guo, Yanhong Xing, Wuyang Wang, "Microglia sing the prelude of neuroinflammation-associated depression", *Molecular Neurobiology*. **(Minor Revision Submitted)**
2. **Qingqing Li**, Siyu Fan, Siqi Chen, Weijie Xie, Xiaonan Pang, Jinjun Ding, Jiaoqiong Guan. "Systemic Lupus Erythematosus Comorbid with Major Depressive Disorder from the Perspective of IL-7R", *Aging*. **(Accepted)**
3. Jiansong Qi, **Qingqing Li,** Tianli Xin, Qixia Lu, Jinyi Lin, Yang Zhang, Haiting Luo, Feifei Zhang, Yanhong Xing, Wuyang Wang, Derong Cui & Mengmeng Wang (2024). "MCOLN1/TRPML1 in the lysosome: a promising target for autophagy modulation in diverse diseases", *Autophagy*. 24:1-11. DOI: 10.1080/15548627.2024.2333715.

Research Experiences

09/2020-06/2023 Target Microglial TRPML1 to Alleviate Depression

Supervisor: Wuyang Wang, Xuzhou Medical University

Position: Graduate student **Xuzhou, China**

- Aimed at molecular mechanisms underlying neuroinflammation and depression.
- Used three animal models to verify the role of microglial TRPML1 in depression.
- Applied methods of *in vivo* and *in vitro* experiments (cell culture; stereotaxic surgery) and basic experiments (qPCR, WB, ELISA, immunofluorescence, etc).
- Processed all data, such as 3D reconstruction rendering, and bioinformatic analysis.
- Concluded a new immune signaling pathway of microglia in the pathogenesis of depression (In progress).

07/2023-10/2023 Investigate the Immunological Relationship between Systemic Lupus Erythematosus (SLE) and Depression

Supervisor: Jinjun Ding, Shanghai Mental Health Center

Position: Research assistant **Shanghai, China**

- Aimed at shared mechanism in the pathogenesis of SLE and depression.
- Used bioinformatics methods of WGCNA, GO&KEGG, PPI, machine learning algorithms, ROC curves, GSEA, immune infiltration, single-cell analysis, and validation experiments of WB, immunohistochemistry staining.
- Concluded that targeting the IL-7/IL-7R pathway could potentially contribute to managing the concurrent progression of SLE and depression, with a particular emphasis on the substantial involvement of IL-7/IL-7R in depression (Accepted).

07/2023–03/2024 The Effects of Cytokines on Addiction

Supervisor: Ti-Fei Yuan, Shanghai Mental Health Center, Shanghai Jiao Tong University

Position: Research assistant **Shanghai, China**

- Aimed at unencoding the molecular mechanisms of cytokine effects on addiction.
- Used both wild-type and transgenic mice to establish the animal model.
- Applied methods of basic experiments (DNA electrophoresis, behavioral test, immunofluorescence, etc).
- Preliminary data indicated significant effects of certain cytokines on addiction (In progress).

Awards

09/2019-06/2020 Sichuan Province's University Student Comprehensive Quality A Grade Certificate

09/2020-06/2021 Second-class Postgraduate Scholarship

09/2021-06/2022 Second-class Postgraduate Scholarship

09/2022-06/2023 Second-class Postgraduate Scholarship

Skills

- **Computer programming:**
  R (Bioinformatics analysis, e.g., TWAS, PWAS, MR, Single-cell analysis, Machine learning algorithms, Multi-omics analysis).
- **Language:** Mandarin (Native), English (Fluent), Japanese (Basic).
- **Software:** Microsoft Office, EndNote, GraphPad, Adobe Photoshop, **Adobe Illustrator** (Proficient), Image J, Imaris.
